

BAISANGUR DUDAYEV

CLOUD & CYBERSECURITY BACHELOR

ABOUT ME

I hold a Bachelor's degree in Cloud & Cybersecurity, with a strong interest in both offensive and defensive security. My passion for understanding how technology works and how it can be exploited or defended has driven me to specialize in areas such as penetration testing, vulnerability management, and secure infrastructure development.

I am also drawn to digital forensics and incident analysis, where uncovering the root cause of attacks and tracing malicious activity provides critical insights for preventing future incidents. This investigative mindset complements my interest in working as a security analyst, monitoring, correlating, and responding to threats in real time.

At the same time, I am motivated by the challenge of security engineering—designing systems that are resilient by default, implementing automation, and integrating security controls into every layer of infrastructure.

I'm currently preparing for the Hack The Box Certified Defensive Security Analyst (CDSA) certification while completing both defensive and offensive labs on the Hack The Box platform to deepen my hands-on cybersecurity expertise.

EDUCATION

Thomas More university of applied sciences Geel, Belgium
Electronics-ICT: Bachelor of Cloud & Cybersecurity
2022-2025

Koninklijk Atheneum Geel, Belgium
Information and Communication Sciences – Secondary Education (5th and 6th year)
2020 – 2022

SOFT SKILLS

- Focus on continuous learning
- Communication
- Disciplined
- Critical Thinking
- Ability to adjust to new situations

LANGUAGES

- Dutch
- English

PROJECTS & SKILLS

- SOC Internship: Contributed to the setup and implementation of a Security Operations Center. Developed a SIEM platform using the ELK Stack and integrated security tools such as Guardian360 and CyberAlarm.
- SOC Environment: Set up and configured a simple SOC environment using Wazuh, monitoring an agent.
- Web Application Pentest: Conducted vulnerability assessments and delivered a pentest report.
- Automated Reporting: Generated automated reports with JavaScript and Python by processing CSV files to highlight vulnerabilities for clients.
- API Development and Integration: Built an API with FastAPI and integrated it into a webpage using JavaScript.
- Automation with APIs: Created Python scripts to fetch and process data from various APIs.
- DevOps: Automated CI/CD pipelines with GitLab CI and AWS CLI for faster application builds and delivery.
- Cloud Computing: Experience with AWS (EC2, S3, ECR, IAM) and Azure (deploying containers, managing resources, and hosting an API). Applied cloud security best practices across both platforms.
- Active Directory: Knowledge and experience with management and configuration, developed across multiple courses during my degree.
- Linux & Docker: Experience with Linux environments and containerization.
- VMware ESXi: Collaborated on a team project to set up and configure VMware ESXi environments.
- pfSense Firewall: Completed a two-day course.
- Networking: Knowledge of Switching, Routing, and Wireless Essentials (based on CCNA curriculum).
- Scrum Methodology: Experienced in an Agile Scrum environment, including sprint planning, reviews, and retrospectives.
